FACILITATOR & COURSE GUIDE

Delivery notes, answers, rehearsal and replay publishing plan

Training delivered by Pacific Wave Digital

Wednesday 21 October 2026 • 9 am–4 pm
Yumiwork Conference Room • Vanuatu time

Find customers. Work professionally. Build digital confidence.

Review edition • October 2026. Images are AI-generated illustrations of fictional people and settings; they do not depict the actual workshop.

Prepare the room and the tools

• Confirm numbers against room capacity. Seat participants in groups of 4–6 where practical; identify a helper at each table and a lead facilitator.

• Confirm how Port Vila and Santo staff will participate and which facilitators lead support, recording and questions.

• Rehearse on the actual Digi Assist AI demo account: website preview, storefront, booking, chatbot, invoice and receipt. Verify access limits and payment-provider availability; do not assume every participant has all features.

• Prepare a fictional demo business. Do not record real customer details, payments, credentials or private dashboards.

• Test projection, audio, Wi-Fi and mobile layout. Keep a printed workbook and offline examples available.

• Open https://storianai.com and test a simple Bislama conversation with a fluent speaker.

• Create and test the PWD course registration flow, replay permissions and question area before distribution.

Materials: slides, workbook, pens, demo business facts and optional personal devices. No participant should be required to buy a subscription during the workshop.

Run of show morning

9:00–9:15 Welcome

5 min BLP host welcome, PWD introduction and recording notice; 5 min goals; 5 min digitisation and the customer journey. Explain paper/shared-device options.

9:15–9:35 Business readiness

8 min name, registration and licence distinctions; 5 min official-source demonstration; 5 min accurate business facts example; 2 min questions. Introduce E1 without requiring completion yet.

9:35–10:10 Google Business Profile

5 min eligibility; 5 min search and ownership; 10 min add/claim demonstration; 10 min guided preparation; 5 min questions and next steps. No fictional live listing. E2 is completed during student exercises.

10:10–10:45 AI demonstration

5 min task, facts, format and limits; 12 min Gemini demonstration; 8 min Storian AI Bislama example; 2 min ChatGPT mention; 8 min fact checking and questions. Save E3/E4 practice for 11 am.

10:45–11:00 Exercise briefing

5 min explain E1–E6 and show the timed slide; 5 min arrange partners, check access and explain the paper option; 5 min questions and confirm the workbook submission/return method.

11:00–12:00 Student exercises

Students complete E1–E6 using written workbook instructions. Only business readiness, Google profile preparation and AI tasks already taught appear in this block. No website lesson or new tool demonstration.

Student exercise delivery

Before 11 am, identify a timekeeper from the assisting facilitators or a willing participant. Agree who collects work, where it goes and how workbooks return for afternoon use. Staffing assignments remain to be confirmed.

Time	Task	Completion evidence
11:00–11:10	E1 Business facts	Accurate details and one business sentence
11:10–11:20	E2 Google profile	Profile plan and ownership/verification next step
11:20–11:35	E3 AI prompt and draft	Four-part prompt and up to 50 words
11:35–11:45	E4 Check and improve	Checked facts and improved copy
11:45–11:55	E5 Partner review	Reviewer suggestion and revision
11:55–12:00	E6 Finish and submit	Name, next action/date and afternoon question

Instructions to read before students begin

Work individually or in pairs. Use your own public business facts or the fictional Island Services case. Follow E1–E6 in order. If stuck, record the issue and continue. Write on paper if a tool or internet connection is unavailable. Submit by noon using the method agreed in the briefing.

Leave the six-step exercise slide visible. The timekeeper announces each change of task. Helpers clarify instructions without introducing new topics. Students who finish early improve their copy or help a partner check facts. Do not create a Google listing for Island Services or collect private account details.

Morning exercise review and answers

What to look for

E1 Business facts

A consistent name, clear offer/customers, public contacts, location, hours and registration next step. Unknown details are marked for follow-up. Accept different businesses and wording.

E2 Google profile

An existing-listing check or explicit offline follow-up; eligibility considered; accurate category, location/service area and hours; owner control and verification next step. A prepared plan is sufficient. Completed verification is not required.

E3 AI prompt and draft

Prompt includes task, true facts, output format and limits. Description has no more than 50 words. A paper prompt and manually written draft meet the task when access is unavailable.

E4 Check and improve

Student compares copy with E1 and explains a correction or a verified claim. Reject invented prices, guarantees, testimonials or contact details.

E5 Partner review

A named reviewer or marked self-review, a useful suggestion and an appropriate revision. Do not require identical answers.

E6 Submission

Name/business, final description in E4, next action with date, and one afternoon question. Note unfinished work for support.

Sample checked description for Island Services

Island Services provides cleaning in Port Vila, Monday to Friday, 8 am–4 pm. Contact the team to discuss your cleaning needs and confirm prices and availability.

Possible correction: remove “guaranteed cheapest cleaning, open every day” because neither claim appears in the supplied facts. No phone number has been supplied, so the student must not invent one.

At 1 pm, use 5 minutes to review two examples without displaying private details. Ask what students checked, then connect the improved description to the website demonstration.

Run of show afternoon

12:00–1:00 Lunch

Prepare the website and retail/service demo paths. Keep collected work secure and return it for afternoon use.

1:00–1:35 Review and website draft

5 min review selected morning answers; 15 min Digi Assist AI first-page demonstration; 10 min Activity 4 draft or paper plan; 5 min partner mobile/contact test. Aim for one headline, one service and a contact action. Remaining fields become follow-up practice.

1:35–2:00 Customers online

5 min storefront demo; 5 min booking demo; 5 min chatbot and fallback demo; 7 min Activity 5 on one pathway; 3 min share-back. Plan one customer task rather than completing every feature. Use test enquiries without real payments.

2:00–2:15 Afternoon tea

Resolve individual blockers and record issues for course Q&A.

2:15–2:45 Documents

5 min invoice versus receipt; 10 min Digi Assist AI demonstration; 10 min Activity 6; 5 min arithmetic/status check.

2:45–3:30 Cyber security

10 min ownership, passwords and MFA; 10 min scams/backups; 15 min Activity 7; 10 min debrief and one account action. Keep recovery codes private.

3:30–4:00 Review and continuation

10 min knowledge check; 8 min 30-day plan; 7 min course replay/Q&A walkthrough; 5 min feedback/close. If the course is not live, explain only the confirmed distribution method.

Demonstration checklist

Tool / action	Success test
Google Business Profile	Find existing listing; explain eligibility, ownership and verification; prepare missing details.
Gemini / Storian AI	Enter fictional facts; compare draft to facts; correct an invented claim; check Bislama meaning.
Digi Assist AI website	Create draft; preview on phone; check contact action and public information.
Storefront	One product; accurate currency/price/stock; test enquiry or supported test order.
Booking	One service; timezone and duration; unavailable slot; confirmation and staff follow-up.
Chatbot	Approved FAQs; unknown question; wrong price request; clear human handover.
Invoice and receipt	Unique references; correct arithmetic; partial payment; remaining balance; readable output.
PWD course	Participant registration; authorised replay access; worksheet download; question and instructor reply.

Exact buttons and account screens may change. Rehearse and capture approved examples shortly before delivery. These materials teach the workflow without inventing unverified interface steps.

Answers and facilitation prompts

Activity 6: worked answer

INV-001: 2 × VT5,000 = VT10,000. REC-001: VT6,000 received on 21 October 2026, cash, against INV-001. Balance outstanding: VT4,000. A partial payment must not mark the whole invoice paid. The example deliberately excludes tax; it is not a compliant tax-invoice specimen.

Activity 7: safer decisions

Code request: do not share it; check the official account. Changed bank details: verify independently with a trusted contact before paying. Invented chatbot booking: correct it, involve staff and improve approved facts/fallbacks. Former staff access: remove inappropriate access and review account ownership/security.

Knowledge check: expected answers

1 No. 2 No—claim or request access to the existing profile. 3 Check facts, promises, language and privacy. 4 No—a receipt records payment received. 5 Verify independently through a trusted contact route.

Ask: “What would a customer see?” “What fact proves that?” “Who owns the next step?” Encourage explanation rather than speed; help participants finish one useful asset.

BLP workshop course on PWD

Suggested course title

Bring Your Business Online: Digitisation, AI and Cyber Security

Suggested description: A practical workshop hosted by Business Link Pacific, with training delivered by Pacific Wave Digital for Ni-Vanuatu participants. Replay the sessions, practise with the workbook and ask instructors questions as you improve your business's online presence and daily work.

Module	Replay + learner task
00 Start here	Welcome, access instructions, workbook and how to ask for help
01 Business readiness	Business facts and registration next step
02 Google Business Profile	Eligibility, existing listing and accurate profile details
03 AI for business	Demonstrations and E1–E6 morning practice worksheets
04 Website	Digi Assist AI first page and mobile/contact check
05 Customers online	Storefront / booking / chatbot demonstrations and chosen pathway
06 Business documents	Invoice, receipt and partial-payment example
07 Cyber security	Account protection and scenario responses
08 Next steps	30-day plan, feedback and instructor questions

Record, publish and support

Before recording

Explain what will be recorded, who will access it and how participants can ask questions off-camera. Confirm appropriate permissions. Prefer instructor screen and audio; keep participant names, faces and personal information out unless agreed. Pause recording for sign-in and private support.

For each session

• Start a separate recording or mark a clear chapter boundary. Suggested filename: BLP-2026-10-21-03-AI-for-business.mp4.

• Review the recording and remove credentials, private data and interruptions before upload.

• Add a short lesson summary, the matching workbook activity, key links and a practice task. Add captions or a reviewed transcript where feasible.

• Offer a smaller replay version if supported, plus downloadable notes for limited bandwidth.

• Test playback and document downloads using a participant account. Check that private recordings are not exposed publicly.

Instructor questions after the workshop

Assign a named question-area owner and backup. Publish the support period and expected response times once agreed. Ask learners to include module, task, attempt and problem; allow English or Bislama questions where instructors can support them. Remove private information before sharing answers more widely.

Suggested learner question: “Module 04: I added my contact button, but it opens the wrong page on my phone. I tried editing the destination. What should I check next?”

Final release checks and sources

Pending before participant release: course URL and access terms; account feature rehearsal; headcount/devices/connectivity; facilitator responsibilities; recording arrangements; Bislama review; and confirmation of workshop logistics. Do not invent a registration QR code or promise permanent access.
